Glossary

Introduction

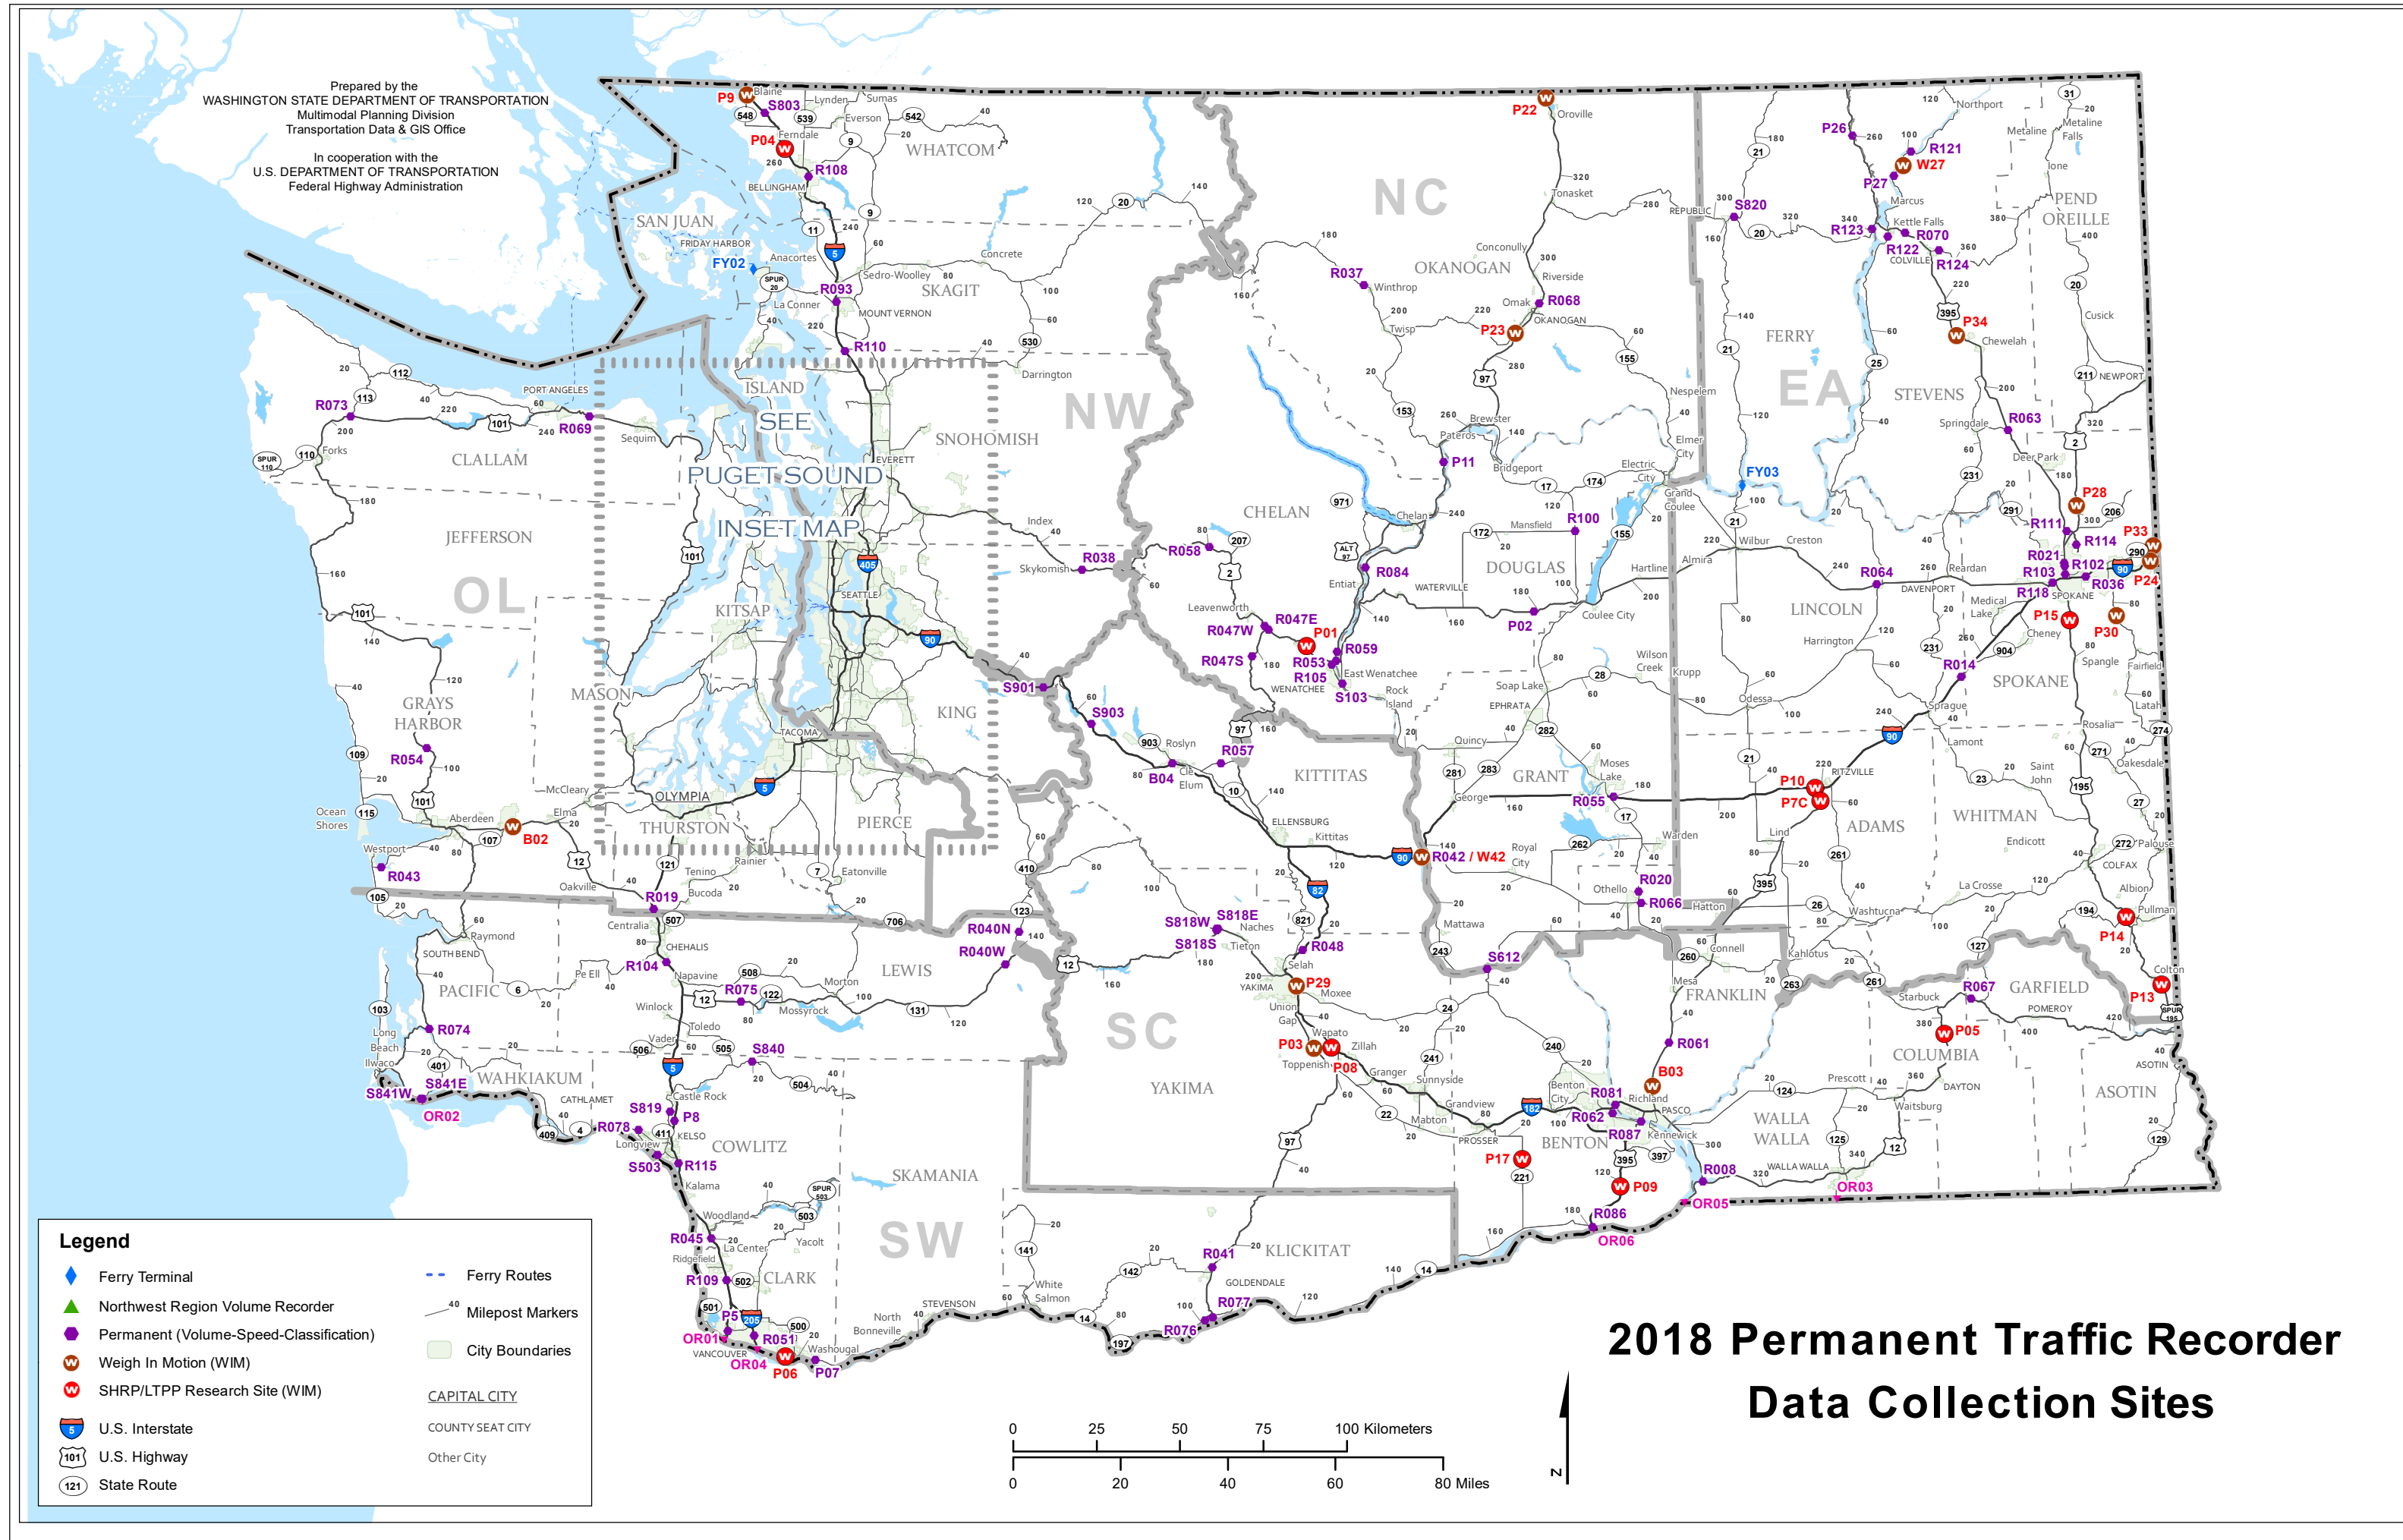

The Washington State Department of Transportation (WSDOT) is responsible for the administration of approximately 7,000 miles of roadway, involving large annual expenditures for planning, design, construction, and maintenance. This requires having reliable and current traffic volume and speed information, vehicle type classification information, and travel statistics throughout the state.

The *Peak Hour Report* lists the top 200 highest volume hours for the year at permanent traffic recorders around the state. Traffic volumes for these hours are provided in both actual terms and as a percentage of Annual Average Daily Traffic (referred to as the K factor). Also provided for each hour is the percentage of total traffic occurring in the highest volume direction (referred to as the D factor). This information is used by engineers and planners to estimate future volumes and design highway features.

For a given permanent traffic recorder, the “design hour factor” will usually represent the 30th highest hour, although when a location displays an atypically strong seasonal variation in traffic volumes then a lower volume hour may be more appropriate. This report provides a summary page that lists average design hour factors by various categorizations. These can be used by planners and engineers when a design hour factor is required but a permanent traffic recorder is not available near the area of interest.

Prepared by the
 WASHINGTON STATE DEPARTMENT OF TRANSPORTATION
 Multimodal Planning Division
 Transportation Data & GIS Office

In cooperation with the
 U.S. DEPARTMENT OF TRANSPORTATION
 Federal Highway Administration

Legend

- ◆ Ferry Terminal

GLOSSARY

AA DT	Annual Average Daily Traffic The average 24-hour traffic volume at a given location over a full 365-day year. That is, the total number of vehicles passing the site in a year divided by 365.
AD T	Average Daily Traffic An average 24-hour traffic volume at a given location for some period of time less than a year. An ADT may be measured for six months, a season, a month, a week, or as little as two days. An ADT is a valid number for only the period over which it was measured.
DDHV	Directional Design Hour Volume
D Factor	The percentage of peak hour traffic traveling in the peak direction.
Design Factor or Design Hour Factor	The percentage of daily traffic that passes a given point during the design hour. Typically, the design hour at a permanent traffic recorder is the 30th or 100th highest hour of the year.
K Factor	The percentage of daily traffic occurring during the peak hour.
K-30	The percentage of daily traffic occurring during the 30th highest hour of the year. K-100 is the 100th highest hour, K-200 the 200th highest hour, etc.
Peak Hour	Highest recorded volume hour for the year at a permanent traffic recorder. For a count with a shorter time period, it is the highest recorded volume of that count.
Recreational or K-REC	Within this report, a permanent traffic recorder where the K-30 is consistently 18.00% or higher is designated as "Recreational" or "K-REC." These sites display an atypically strong seasonal variation in traffic volumes. The suggested design hour for these sites is the K-100.

AADT= 22,928 K 30 FACTOR= 11.30 K 100 FACTOR= 10.18 K 200 FACTOR= 9.53 D 30 FACTOR= 63.84
